

More than just monitoring:

Introducing the Enhanced Luscii Timeline

At Luscii, we're committed to placing patients at the centre of their healthcare experience. Our updated Luscii Timeline feature is specifically designed to provide patients with timely, relevant information, empowering them to take control of their care journeys.

The enhanced Luscii Timeline highlights the most crucial actions for patients, focusing on today's tasks while also offering the option to explore their entire care pathway if they desire. By breaking down the journey into small, manageable steps, we aim to enhance the patient experience while enabling care providers to adapt and customise pathways to better meet individual patient needs.

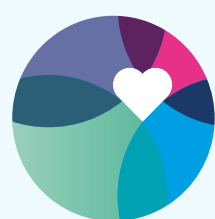

The Luscii Timeline also introduces "Moments", which are key upcoming events prominently displayed on the patients' schedule, aiding them in preparation and staying well-informed. Care providers can also organise pathways into distinct phases throughout the patient journey, ensuring clarity and coherence.

The app's additional features allow patients to submit vital measurements, access supplementary information curated by their healthcare team, and receive timely notifications for crucial actions. This comprehensive update not only empowers patients but also facilitates seamless communication and collaboration between patients and care providers.

With the enhanced Luscii Timeline, we continue to strive towards delivering a patient-centric healthcare solution that promotes empowerment, engagement, and improved outcomes.

- Highlights crucial actions for patients to focus on today, with the option to explore the full care pathway and their next steps
- More than just monitoring, with guidance and information delivered at the right time
- A timeline built around "Moments"- a significant upcoming event where specific actions and information are provided to help the patient prepare and support their aftercare.
- Care providers can organise pathways into distinct phases for clarity
- Additional features include submitting measurements, accessing curated information, and receiving timely notifications
- Fosters communication and collaboration between patients and care providers
- Actions can be set for either shorter or longer time frames, depending on the patients needs.
- Alerts can be set in specific time frames for better adherence
