Introducing Patient Self-Onboarding

Empowering Patients, Streamlining Care

In healthcare, efficient patient enrolment and streamlined care management are more important than ever. Healthcare providers are constantly seeking ways to reduce administrative burdens while ensuring patients receive the best possible care. Luscii's new Patient Self-Onboarding feature addresses this challenge by allowing patients to enrol themselves directly into a care pathway via a simple link.

This powerful feature enables patients to take control of their own care journey while simultaneously reducing the time healthcare providers spend on administrative tasks. By leveraging technology, we can create more space for meaningful, face-to-face care and help providers reach more patients with less effort.

Introducing Patient Self-Onboarding

- **Faster, More Efficient Enrolment:** Patients can self-enrol in care pathways, reducing manual administration time and enabling faster onboarding for essential services.
- **Patient Empowerment:** Self-enrolment empowers patients to take an active role in their healthcare, fostering engagement and adherence to care plans.
- **Reduced Administrative Burden:** Healthcare providers can focus more on patient care as less time is spent on administrative tasks like enrolling patients.
- **Scalability and Impact:** Automation allows for swift addition of more patients to care pathways, enabling healthcare organisations to scale efforts and deliver care at scale.
- **Integration:** Seamless integration of Patient Self-Onboarding with existing Luscii systems ensures a smooth transition with minimal disruption to existing workflows.
- **Enhanced Patient Experience:** Streamlined enrolment process improves patient satisfaction and reduces friction during treatment initiation.

The app's additional features allow patients to submit vital measurements, access supplementary information curated by their healthcare team, and receive timely notifications for crucial actions. This comprehensive update not only empowers patients but also facilitates seamless communication and collaboration between patients and care providers.

With the enhanced Patient Self-Onboarding we continue to strive towards delivering a patient-centric healthcare solution that promotes empowerment, engagement, and improved outcomes.

Summary Cheat Sheet:
Feature Patient Self-Onboarding

How it works:

Patients receive a link to self-enrol in a care pathway without needing assistance from healthcare providers.

Key Benefit:

- Reduced administrative workload for care providers
- Empowered patients who actively engage in their care
- More patients enrolled in care pathways with minimal time investment

For Patients:

- Easier and faster enrollment into care pathways
- A greater sense of control over their healthcare journey
- Reduced friction when starting new care protocols

For Healthcare Providers:

- Less time spent on administrative tasks
- Increased capacity to serve more patients
- More time for direct patient care and improving health outcomes

By automating the self-enrollment process, Patient Self-Onboarding not only streamlines operations but also enhances the patient experience. With more patients able to easily enrol in their care plans, healthcare organisations can achieve greater reach and impact while focusing on delivering the highest level of care.
